[T-4 sampling methodology.doc](#)

This is to confirm that we will be meeting this Wednesday starting at 1:30 at DEQ's NWR office Conference Room E. Carl will be joining us by phone.

I've attached a draft statement of purpose that will be our first order of business on Wednesday, i.e., to get everyone's input and get agreement on what it is that we have all signed up to do. I've purposefully CC'd the managers to provide them an opportunity for input if they so desire - please send any comments/suggestions back to me by Wednesday AM if possible.

I've also attached a basic description of the sampling methodology from the T-4 recontamination analysis. Nicole, please send the chapter to folks or bring copies to the meeting on Wednesday.

As we've discussed - the purpose of looking at the T-4 methodology is to give us a starting point for identifying various methodologies and techniques and evaluating their strengths and weaknesses for various uses. I'll have some other materials at the meeting that we can (hopefully) use to focus our discussion. If you have resources or references that would help support our efforts (e.g., guidance documents, journal articles) please bring them along.

Thanks - see you Wednesday!

Karen
